

Compilation of snapshots from videos Ex 60, 62, and 63 showing a consistent plumb of pulverized and fractured glass “down range” along the track of the bullet.

NOTE: 1st shoot. Shooter in passenger seat to determine safety and reaction of glass to bullet.

NOTE: 2nd shoot. Shooter in driver's seat to determine reaction of glass to bullet without obstruction on exterior (e.g., Baldwin's body).

NOTE: Plumb of pulverized glass, NOT GSR based on later re-enactments where bullet did NOT pass thru glass.

NOTE: 3rd shoot. Shooter in driver's seat to determine reaction of glass to bullet if Baldwin was outside with face close to window at time of shot under State's theory at trial.
